

## MASONRY

### CURVED PARTITION WALL

This partition wall is made of two leaves of single hollow brick laid with plaster paste. Among them, there is an air space.

One leaf finishes in the concrete pillar; and the other leaf surround it, forming an arch. The bricks of the exterior leaf have been placed to seem like an arch, with its curve. Some bricks have been cut to get a good finished between stretcher bond bricks and stretcher face bricks.

Finally, one face of the partition wall has laid a base coat of rough plaster to let that a setting coat of thin plaster could be laid later.
