

LIGHT ENCLOSURES

LIGHT ENCLOSURE (curtain wall)

The profiles “L” is welded to the building structure or an auxiliary structure for let the anchoring of aluminum vertical elements with horizontal elements (through screws). All of this make as a frame.

The framing enclosure is made of panels formed by double tinted glass, separate them with a sealed camera.

The finished of the eave is made of a gutter to collect rainwater.

This installation has trim profiles which hides the anchors.
