

GLASSWORK

DOUBLE MOULDED GLAZED ENCLOSURE WALL

This enclosure is built over metallic profiles which make the perimeter expansion joint.

The double moulded translucent glasses are surrounded by steel bars (horizontally and vertically; these steel bars are fixed them with wire) and they are covered to cement mortar.

The structure of metalwork, with a tilting window pane is protected, previously, with a coat of red lead.

The steel bars between the moulded glazed has a finished of white cement.
